

Sprint 2: 2/6/2023 - 2/12/2023**What went well?**

| | |
|---------------|---|
| Abhay | I figured out how to make an basic webapi, and a basic frontend. |
| Anh | better understanding of the project code and file structure. |
| Aster | Research went decently good. Communication increased between group members and volunteered to take notes in the meetings |
| David | I was able to focus on the designs and gave myself more time to handle the success cases of my design. This allow me to have time to make multiple versions of my designs and see flaws I might have missed in previous iterations. |
| Sierra | I got alot of work done for account creation and finished the backend implementation of the feature. I checked in with my group members and reminded them of approaching due dates. |

What went wrong? / what could be improved?

| | |
|---------------|--|
| Abhay | There was an consistent error from CORS. Which after much research I was not able to solve, which blocked my progress for this sprint. |
| Anh | Nothing in particular went catastrophically wrong. |
| Aster | My lack of understanding in many fields, especially frontend including html |
| David | I did not have enough time this week to put in enough hours to get a reasonable amount of work done. I was only able to get success case designs done for account recovery when I should have put in more time to at least finish success and failure cases of the design. |
| Sierra | I was not able to finish my design for my assigned project specific feature and will work on the next sprint along with the front end of account creation. I also communicated with my team what i was doing on particular days and what i got done. |

How can we improve?

| | |
|---------------|--|
| Abhay | I am going to meet the professor on monday to resolve the CORS issue, and/or get a better direction on how to resolve it. |
| Anh | Communicate more with the team and vocalize actions. |
| Aster | Research more, learn more through guide videos on how to meet the needs |
| David | I will try to move my schedule around to allow for at least a minimum of 20 hours a week to work on task. I will try to be more consistent by limiting myself to a max of 2 days off per week but try to keep it at 1 or 0 days off. |
| Sierra | We can improve by everyone sending in updates of there progress on there assigned work items and if they are on schedule at the end of each day. |
