

Sprint 1: 2/20/2023 - 2/26/2023**What went well?****Abhay**

We set deadlines, and met most of them on time.

Anh

Nothing in particular went well for me; everything was quite average. We coordinated as a team however, and I think that was good.

Aster

I was able to understand my mistakes in the LLD early enough before going into coding. The team was more focused on getting the work done each day than last time with multiple announcements and reminders everyday.

David

I was able to create success cases for my DIY Manager LLD smoothly and efficiently. I was also getting more practice and efficient in making the designs. I was also able to check in with team member work often to see how their work has progress.

Sierra

I was able to finish the success case and failure cases for request management and can now start implementation and get a peer review. The team was able to improve our sprint planning by spending 30mins - hour filling out the document together.

What went wrong? / what could be improved?**Abhay**

I forgot to fill some scrum documents couple of days. And some people did the same, and also some members did not meet deadlines.

Anh

Like Aster, I feel like my confidence isn't all too high. I think we need to plan out a database schema; it will help enormously with building the backend.

Aster

I felt myself straying off from the project more. I try to keep up with the work needed to be done and it all gets done at the last final moment rather than earlier times. Other schoolwork is pushing my times off the work also.

David

The team internal deadline goal was for finishing a part of their task by Friday 10am and it was again not finished by everyone else. Abhay and Sierra was a couple hours late but was able to finish and post their work on Friday afternoon. Aster was able to only finish one failure case LLD and Anh never responded to submit his assigned tasks. I also think I rushed the first draft of my DIY Manager LLD too much and left some mistakes in there where I had to keep going back to fix. I also had a lot of trouble designing the failure cases of users entering invalid information or leaving inputs blank.

Sierra

I should have put in more effort to finish the LLD earlier so I can start on the implementation earlier. The team still needs to fill out each scrum document when reminded in the chat. We can improve this by setting a strict time or deadline everyday for the documents to be filled out and to discuss any issues so the documents can be done on time. We can try 12pm everyday or towards the end of the day such as 11pm.

How can we improve?

Abhay	Set 12 pm as the deadline time to fill scrum documents, so people do not have to remind other members.
Anh	Like mentioned above, I would like to design out a database according to the project scope and domain.
Aster	I just gotta do it and somehow motivate myself instead of pushing the workload to later times. I will work at least 3 hours on the Friday and weekends and at least 1 hour on weekdays I am not putting my day off. I will try to make sure I do not go above 5 hours on the weekends due to pushing off the workload too much.
David	We will set another mid-sprint internal due date at the halfway mark of sprint 5 for Friday March 3rd to be completed by 12pm Noon. I will ask each member on Wednesday March 1st and Thursday March 2nd at 10pm nighttime of their progress toward their goals and if I have time to also view what has been completed so far towards that goal. That way I can check if they are on schedule but I would still need enough time for my work.
Sierra	The team needs to ask questions beforehand and not right before things are due instead of putting it off. We can improve by gathering our questions the day before we have class and asking them at the end of class.
