

Sprint 1: 1/30/2023 - 2/5/2023**What went well?**

Abhay	While not always hitting the capacity I projected, I was able to consistently work everyday. Which is a big improvement from last semester.
Anh	Integrating with the group in the documentative aspect and leaning all about their project scope.
Aster	Not very much other than having to research more and learn new project
David	I was able to complete my task but I did not have enough time to take on alot of tasks. Also I was able to learn alot of new things about Figma that I can use later.
Sierra	This sprint was full of research that will hopefully help make implementation of my assigned features easier.

What went wrong? / what could be improved?

Abhay	Lack of communication from the new team members, which lead to delaying of work. And I also overestimated my available time which lead to me not finishing the task I was given.
Anh	Being able to integrate with new group's technical portion and being able to understand the project files and code given all the disparities.
Aster	New project, new group, so I need to step up and get on the work. Also my schedule is far tighter than other people. Need to interact with group members more
David	I will spend extra time learning how to use Figma features so I am prepared for future designs. I will also try to direct message group members for a faster response with either phone number text or with discord direct messages.
Sierra	There is a lack of communication during the work week and that could be improved by everyone actually saying what they are doing that day in the chat. I also did not start any implementation so I can improve this in the next sprint by starting on my features.

How can we improve?

Abhay	Lack of communication from the new team members, which lead to delaying of work. And I also overestimated my available time which lead to me not finishing the task I was given.
Anh	
Aster	Try to communicate more and respond better. Figure out a good way to work out time.
David	I will try to set more time for researching and designing my features. I will spend at least 10 hours minimum for success cases and 10 hours minimum for failure cases in future sprints.
Sierra	By checking in more with my group members and sending them reminders of due dates on mondays, wednesday and once over the weekend at 12pm.
