Sprint 5: 2/27/2023 - 3/5/2023	
What went well?	
Abhay	Everyone was on time, which gave everyone enought time to peer review designs.
Anh	Following Scrum process and adhereing by it to complete tasks.
Aster	I personally did not do well this sprint at all.
David	I started off well in the beginning and was on track to being ahead of the plan schedule and my estimates for task completed took less time than estimated which was good. I think my estimations have be over estimation most of the time but I beleive that is good to have incase something else is an under estimation then I will have time to complete everything.
Sierra	Everyone was able to commit time to complete their low level designs for a peer review and internal deadlines where met.
What went wrong? / what could be improved?	
Abhay	I changed design 3 times during designing. Which could have been easily prevented if I did enough research to check the data and if it available. Where some data was discontinued and some were not useful. Which lead me not being able to finish Tests for the feature.
Anh	I was quite busy this week this spring period and I could not get much work done.
Aster	I am behind in time by at least 10 hours according to project plan and project backlog hours.
David	I forgot to account for peer review during the sprint planning and had to change my focus away from my tasks to work on the peer review. This caused me to not be able to finish the tasks that was given to me and no progress being made near the end of the sprint. The mid-sprint deadline had everyone turn in their task on time this sprint but some work seemed rush as there was no front end designs and the designs submitted was the bare minimum.
Sierra	The team still are not filling out scrum documents on time and there is little communication throughout the week. When I ask a question in the chat or post reminders to fill out scrum documents and deadlines they go unanswered.
How can we improve?	

Abhay	In the case of this particular feature doing more exploration of the dataset would have been way more efficient. Finish the tests in the next 2 days, so I can start working on the implementation.
Anh	I think we need to structure and organize our git repositories more as they are integral for keeping clean and working code.
Aster	As I am working on one feature only, I will focus on getting the sprint done by the next peer/code review by working at least 9 hours between Friday and Sunday, inclusively. I also will understand my lack of ability and take less workload in the next sprint.
David	I need to make sure I am aware and plan ahead of the sprint of when other things are due so I can add them as tasks within the sprint. This next sprint has the extended due date for the peer review within it so any time I need to spend on that will be planned ahead of time. Also next sprint after that will also contain the code review so I need to preplan my sprint to inlcude time for that also.
Sierra	We can improved by everyone taking some time of their day to actually meet up virtually to discuss their daily task and important issues regarding any code or team decisions. I recommend everyone allotting 15-30mins of their time in the evening such as 10 or 11pm to discuss for the next days task since we are all mostly free around this time.
